The Department of Geography at the University of Oregon is one of the top ten geography programs in the country. We feature faculty and students researching and teaching about cutting-edge important societal issues, such as racism, climate change, water resources, economic development, land use, conflict, migration, spatial data science, cartography, and more.

Students are encouraged to develop skills in communication, problemsolving, critical thinking, and data analysis as they explore subjects that ask them to think holistically about the systems that shape our planet. Our faculty help students see the amazing complexity that shapes our planet and our experiences within it. Our classrooms provide inclusive and engaged learning environments so that students find their own interests to explore, helping them make meaning and find their place in the world.
