Students and Faculty in the Department of Linguistics engage with language acquisition, use, and change at the intersection of human cognition, culture, and computation. We offer course work and research experiences that combine language with culture and society; action and cognition; and computation and learning.

We offer a major or minor in Linguistics that combines coursework in the discipline with language courses from at least two languages other than your first language. We also offer a minor in Interdisciplinary Cognitive Science and provide special emphasis courses for the Data Science major. As an interdisciplinary field, Linguistics combines well with majors or minors from a variety of other disciplines from Romance Languages to Data Science, Psychology to Computer Science, and Sociology to Communication Disorders and Sciences, to name but a few.

Students can also earn a certificate in Second Language Acquisition and Teaching (SLAT) as a starting point for careers in language teaching.
