Students of architecture learn how to make physical changes to their surroundings that enhance the quality of the built environment and their community’s experience of life. Within this broad purpose, architectural study and practice include the tasks of providing shelter and environmental protection, providing appropriate settings for human activities, and creating forms that are aesthetically pleasing and supportive of social well-being. In the context of rapid urbanization, climate change, transforming economies, emerging technologies, growing inequalities, and other challenges, the potential impact and value of architectural design has never been greater.

Because interdisciplinary collaboration is key to the practice of architecture, the Department of Architecture shares classes and facilities with the Interior Architecture Program and the Department of Landscape Architecture in Eugene and the Historic Preservation Program in Portland, all units within the College of Design’s School of Architecture and Environment.

A central part of education in the field of architecture is the design studio, where students learn by doing—hands-on application of knowledge and skills toward the design of buildings. This type of learning is demanding, and students are expected to stay motivated and work independently and responsibly toward program and course objectives. In the design studio, continuous evaluation and response are the basic learning modes.

The department sets high standards for student performance. Advanced students often work together in courses and as collaborators with faculty members in research investigations through independent-study courses.
